GLP-1 ELISA Kit

GLP-1 is the gastrointestinal peptide hormone secreted from intestinal L cells, and shows the hypoglycemic action through the enhancement of insulin secretion and the suppression of glucagon secretion by the sugar stimulus. The report has been issued that GLP-1 is useful for the treatment of type 2 diabetes as the new therapeutic agent for diabetes.

GLP-1 ELISA Kit Wako, High Sensitive (Total GLP-1 assay)

GLP-1 ELISA Kit Wako, High Sensitive, is a sandwich ELISA system for quantitative measurement of mouse/rat GLP-1.

[Kit Contents]

	Components	Amount
1	Antibody-coated Plate	1 plate
2	GLP-1 Standard	1 bottle
3	Buffer Solution	60 mL/1 bottle
4	Biotinylated Anti GLP-1 Antibody Solution	100 µL/1 vial
5	Peroxidase-conjugated Streptavidin Solution	100 µL/1 vial
6	TMB Solution	12 mL/1 bottle
7	Stop Solution	12 mL/1 bottle
8	Wash Solution (x10)	100 mL/1 bottle
9	Plate Seal	4 sheets

[Performance]

- Concentration of the standard solution : 0.94-30pM
- Dynamic range : 4.7-150pM *Case of 10 µL
- Sample volume : 10µL
- Measure time : 4 hour
- Cross-reactivity : mouse, rat

LBIS Mouse/Rat HMW Adiponectin ELISA Kit

Adiponectin is one of cytokines secreted from adipocyte (adipocytokines, adipokines), and controls lipid metabolism and insulin sensitivity. Adiponectin is an important substance showing anti-diabetic, anti-atherosclerotic, and anti-inflammatory actions.

Mouse/Rat HMW Adiponectin ELISA Kit is a sandwich ELISA system for quantitative measurement of mouse or rat High Molecular Weight Adiponectin.

[Kit Contents]

1 Antibody-coated Plate	1 plate
2 Standard Adiponectin (2000 ng/mL)	200µL/1 vial
3 Buffer Solution	60 mL/1 bottle

Glucagon ELISA Kit

Glucagon is a peptide hormone comprising 29 amino acids and secreted from α cells in the islets of Langerhans. Physiologically, it acts on liver to degrade glycogen to glucose and increase blood glucose level. Together with insulin, it plays an important role in maintaining blood glucose level.

Glucagon ELISA Kit Wako (Sandwich method)

This kit uses sandwich ELISA with a monoclonal antibody that recognizes N-terminal and a monoclonal antibody that recognizes C-terminal of glucagon. The assay with this kit shows little cross-reactivity, if any, to glucagon-related peptides such as glicentin, oxyntomodulin, GLP-1 or GLP-2.

PYY ELISA Kit

PYY is a gastrointestinal peptide hormone consisting of 36 amino acid residues. It is mainly released from endocrine cells localizing in the intestinal tract after food ingestion, and inhibits appetite through the vagus nerve and blood.

Mouse/Rat PYY ELISA Kit Wako

This ELISA kit is used for the quantitative determination of mouse and rat PYY in plasma and serum samples.

Insulin ELISA Kit

Insulin is a peptide hormone secreted from B cells of islet of Langerhans in the pancreas with a molecular weight of about 5800 and pI 5.4. It is consisted of 2 chains, A and B. It has 3 disulfide bonds formed between A6 and A11, A7 and B7, and A20 and B19.

FUJIFILM Wako Shibayagi Corporation offers a variety of kits for the measurement of insulin for your purposes. Select a kit that fits your researches.

C-peptide ELISA Kit

C-peptide is released into the blood in approximately equimolar to insulin by the processing of proinsulin, a precursor of insulin. By the measurement of C-peptide concentration in the blood, it is possible to know the insulin secretory potency of pancreatic β cells in the case during insulin administration or insulin antibodies existing.

C-peptide (U-type) series

This product is ELISA kit measurable specifically of C-peptide in the mouse or rat specimen.

GH ELISA Kit

Rat GH ELISA Kit

GH (Growth hormone) is a simple protein mostly produced by acidophilic cells (somatotrophs) of the anterior pituitary gland. GH shows biphasic action on glucose metabolism. GH first shows insulin-like action tentatively, but later induces lipolysis and increase of free fatty acids in the adipocytes, upraise of blood glucose level, suppression of glycolysis, increase of glycogen content in muscle, and lowering of insulin sensitivity in peripheral tissues.

Rat GH ELISA Kit is a sandwich ELISA system for quantitative measurement of rat GH (GrowthHormone).

LH ELISA Kit

LH(Luteinizing Hormone) is produced and stored in basophilic cells called gonadotrophs in the anterior pituitary gland. LH is found in all vertebrates from fishes to mammals. Some reports indicated the presence of LH-like substance in the testis. Rat LH ELISA Kit (S-type) is a sandwich ELISA system for quantitative measurement of rat LH.

Apolipoprotein B-48

Apolipoprotein B-48 is a specific structural protein in lipoproteins derived from the small intestine, such as chylomicron (CM) and chylomicron remnants. Since one role of CM is to transfer exogenous lipids derived from food to the liver or peripheral tissues, the measurement of Apo B-48 is considered a best marker for observation of exogenous lipid transportation after food intake.

Orexin A ELISA Kit Wako

Given that the level of orexin A in the cerebrospinal fluid is significantly decreased in patients with narcolepsy, a type of sleep disorder, orexin A is thought to play an important role in controlling sleep functions. The level of orexin A has been measured conventionally using radioimmunoassay. However, due to the need for radioisotopes (RI), the measurements could only be performed at dedicated institutions with proper equipment.

This product is an ELISA kit that enables simple measurements of orexin A from human cerebrospinal fluid, as well as rat cerebrospinal fluid, serum, and plasma without the need for radioisotope.

[Performance]

- Assay range: 4.69 ~ 300 pg/mL
- TestTime : About 20 hours
- Sample volume: 25μL
- Samples: human cerebrospinal fluid, rat cerebrospinal fluid, rat plasma, rat serum

YNT-185 Dihydrochloride Hydrate

YNT-185·2HCl is non-peptide orexin receptor 2 (OX2R) agonist. Orexins are a family of neuropeptides, which are secreted by orexin-producing nerve present in the hypothalamus. There are two variants, orexin receptors exist as two types of receptors, type 1 and type 2. In particular, the orexin 2 receptor is involved in sleep-wake regulation, and orexin deficiency in the brain causes narcolepsy, a sleep disorder manifesting as an unbearable sleepiness during the day. Although it has been reported that intraventricular administration of orexin leads to symptom alleviation in narcolepsy mouse models, therapeutic effects cannot be expected unless it is administered into the brain, due to orexin being a peptide and being unable to pass through the blood-brain barrier. Intraventricular or intraperitoneal administration of YNT-185·2HCl has been shown to extend wake time, and has also been reported to improve the symptoms of narcolepsy mouse models.

LabAssay™ Series

The LabAssay™ Series is a collection of biochemical assay kits for analyzing samples from humans, mice, and other animals. Since analyses are performed in microtiter plates, many samples can be concurrently evaluated, and only small sample amounts are needed.

LabAssay™ Overview

Code No.	Measuring factor	Animal species	Sample	Standard curve range	Sample amount	Measuring time	Pkg size
295-78901	Ammonia nitrogen	Mouse, Rat, Human	Blood	100~400µg/dL	70µL	approx. 70min	700 tests
290-63701	Triglyceride	Mouse, Human	Serum	100~888mg/dL	2µL	approx. 10min	1,000tests
296-63801	Phospholipid	Mouse, Human	Serum	150~596.1mg/dL	2µL	approx. 10min	1,300tests
294-65801	Cholesterol	Mouse, Human	Serum	50~592.2mg/dL	2µL	approx. 10min	1,000tests
290-65901	Creatinine	Mouse, Human	Serum	2.5~10mg/dL	50µL	approx. 40min	500test
298-65701	Glucose	Mouse, Human	Serum	50~500mg/dL	2µL	approx. 10min	1,000tests

LabAssay™ Ammonia

Ammonia is mainly produced in the intestine or the kidney. Ammonia produced in the body is converted to urea through a series of reactions known as the urea cycle in the liver and eliminated through urine.

Assay Principle (Modified Fujii-Okuda Method)

Ammonia is converted to Dioxydiphenylamine by the reaction of Phenol and Sodium Pentacyanonitrosyl ferrate(III). A reaction of the Dioxydiphenylamine with Sodium Hypochlorite produces Indophenol, which pigments blue, under alkaline conditions. LabAssay™ Ammonia is a kit used for the quantitative determination of ammonia nitrogen in samples by measuring absorbance of the blue color.

[Kit Contents]

1	Deproteinizing	100mL×1vial
2	Chromogen Reagent A	50mL×1vial
3	Chromogen Reagent B	25mL×1vial
4	Chromogen Reagent C	50mL×1vial
5	Ammonia Standard Solution	15mL×1vial
6	Dilute solution for Standard	20mL×1vial

[Performance]

- Standard curve range 100~400µg/dL(µg/100mL)
- Measurement time approx. 70 minutes
- Amount of sample 70µL
- Measurement wavelength 630nm

LabAssay™ Triglyceride

Triglycerides are neutral fats consisting of three fatty acids esterified to a glycerol backbone. There are triglycerides, cholesterol, phospholipids, free fatty acids and fat-soluble vitamins as lipid-soluble substances in the blood.

Assay Principle

Triglycerides are converted to glycerol-3-phosphate by lipoprotein lipase and glycerolkinase. Hydrogen peroxide, which is produced by a reaction between the glycerol-3-phosphate and glycerol-3-phosphate oxidase(GPO), promotes oxidative condensation of N-ethyl-N- (2-hydroxy-3-sulfopropyl) -3,5-dimethoxyaniline sodium salt(DAOS) with 4-aminoantipyrine. LabAssay™ Triglyceride can be used to detect triglycerides concentration in samples by measuring absorbance of a blue color which is generated by the oxidative condensation reaction.

[Kit Contents]

1	Buffer	105mL×3vials
2	Chromogen Substrate	for 105mL×3vials
3	Standard Solution	10mL×1vial

[Performance]

- Standard curve range 100~888mg/dL(mg/100mL)
- Measurement time approx. 10 minutes
- Amount of sample 2μL
- Measurement wavelength 600nm(Main), 700nm(Sub)

LabAssay™ Phospholipid

Phospholipids are known as not only as major component of cell membranes but also perform vital functions within the body such as emulsification and absorption of fats or coagulation of blood.

Assay Principle (Choline Oxidase • DAOS method)

Phospholipids are hydrolyzed by Phospholipase D to release hydrogen peroxide. The formed hydrogen peroxide promotes oxidative condensation of N-ethyl-N- (2-hydroxy-3-sulfo-3-propyl) -3,5-dimethoxyaniline sodium salt (DAOS) with 4-aminoantipyrine. LabAssay™ Phospholipid is a kit to determine Phospholipid concentration in samples by measuring absorbance of a blue color which is generated by the oxidative condensation reaction.

LabAssay™ Cholesterol

Cholesterol, a major component of cell membranes and the starting material in steroid synthesis in many animals, is a factor behind arteriosclerosis and other vascular diseases.

Assay Principle (Cholesterol Oxidase • DAOS method)

Hydrogen peroxide produced by a reaction of cholesterol and cholesterol oxidase let N-Ethyl-N- (2-hydroxy-3-sulfo-3-propyl)-3,5-dimethoxyaniline sodium salt (DAOS) and 4-Aminoantipyrin oxidize and condensate. LabAssay™ Cholesterol is a kit to determine total cholesterol by measuring absorbance of the blue color which is generated by the oxidative condensation reaction.

LabAssay™ Creatinine

Creatinine is a metabolite which is produced by creatine phosphate directly or dehydration of creatine in muscle and nerve. It is excreted from the body through kidney glomerular filtration.

Assay Principle (Jaffé method)

LabAssay™ Creatinine can be used to measure the creatinin levels in samples by Jaffe's reaction where creatinine produces quantitatively an orange color with picric acid in alkaline condition.

[Kit Contents]

1	Depoteinizin Reagent	150mL×2vials
2	Picric Acid Reagent	for 150mL×2vials

LabAssay™ Glucose

Sugar is one of the most important sources of energy in biology. It is regulated by various factors within an organism. Glucose converges to a stable ratio of α-form and β-form in solutions.

Assay Principle (Mutarotase • GOD method)

α-D-Glucose is converted to β-D-Glucose by mutarotase. Hydrogen peroxide, which is produced by a reaction between β-D-Glucose and glucose oxidase(GOD), promotes oxidative condensation of phenol with 4-aminoantipyrine quantitatively. LabAssay™ Glucose is a kit used for the quantitative determination of glucose concentrations in samples by measuring absorbance of a red color which is generated by the oxidative condensation reaction.

[Kit Contents]
