Anti Phosphorylated Tau T181, Rat Monoclonal Antibody (2E2-A6)

抗りん酸化 Tau T181, ラットモノクローナル抗体(2E2-A6)

Background

Tau is a microtubule-associated protein, mainly expressed in neurons in central nervous system, and regulates stabilization of microtubules¹⁾. In the brain of Alzheimer's disease patients, neurofibrillary tangles are formed which are composed of accumulated phosphorylated forms of Tau¹⁾. The degree of these tangles correlates to the severity of dementia¹⁾. Based on this finding, Tau has been investigated to find out the etiology and to discover drugs for Alzheimer's disease. This product is an antibody that specifically recognizes Tau with phosphorylated threonine at position 181 (pT181).
