Glyceraldehyde-3-phosphate dehydrogenase (GAPDH) is a tetramer of identical chains that catalyzes reversible oxidative phosphorylation of glyceraldehydes-phosphate in the presence of inorganic phosphate and nicotinamide adenine dinucleotide. GAPDH is thought to be a constitutively expressed housekeeping protein and a popular internal standard used in gene expression studies.

This antibody is produced by immunizing mouse with synthetic peptide [CRLEKPAKYDDIKK], coupled to keyhole limpet hemocyanin (KLH) and conjugated with peroxidase.
