抗アミロイド β 42 (43), モノクローナル抗体 (BC05)**Background**

Amyloid β (A β) is a peptide which consists of about 40 amino acids. A β is considered the cause of Alzheimer's disease, because it is a major component of senile plaques formed in brains of Alzheimer's disease patients. A β has several types differing in length of the amino acid. The main types are A β 40 (40 amino acid), A β 42 (42 amino acid), and A β 43 (43 amino acid). This item is a mouse monoclonal antibody that specifically reacts with A β 42 and A β 43¹⁾. The antibody was developed by Takeda Pharmaceutical Company Limited.
