Rat Monoclonal Antibody (TIP1-35)****抗りん酸化Tau S262,  
ラットモノクローナル抗体(TIP1-35)****Background**

Tau is a microtubule-associated protein, mainly expressed in neurons in the central nervous system, which regulates stabilization of microtubules<sup>1)</sup>. In the brain of Alzheimer's disease patients, neurofibrillary tangles are formed which are composed of accumulated phosphorylated forms of Tau<sup>1)</sup>. The degree of these tangles correlates to the severity of dementia<sup>1)</sup>. Based on this finding, Tau has been investigated to find out the etiology and to discover drugs for Alzheimer's disease. This product is an antibody which specifically recognizes Tau with phosphorylated serine at position 262 (pS262).
