About Solvionic

Solvionic is a SME developing specialized chemistry of Ionic Liquids. The main market of Solvionic is that of electrochemical devices, and particularly, electrochemical energy storage systems. Our production facilities and strategy allow fast and reliable scale-up of our products, in order to commit to industrial needs.

Our quality control procedures that were specifically developed for ILs products is one of Solvionic's key know-how that allows the commercialization of the highest purity standard of the ILs market.

Solvionic is also expert in the research and development of new materials and processes based on the use of ILs. Our main R&D activity is devoted to the development of the next generation electrochemical energy storage systems based on the use of ILs (next generation metal-ion batteries, supercapacitors... etc.).

High quality electrolytes & materials

High Purity: Electrochemistry Grade 99.9% - H₂O < 20ppm - Halide < 1ppm - Amine compounds < 10ppm.

Packaging: Our products are packed in aluminum containers filled with argon gas (H₂O < 0.5ppm, O₂< 0.5ppm).

Quality control

Custom made

Pack size: 50g to 200Kg

Quality Control: we use several analytical methods, such as Ionic Chromatography, Cyclic Voltammetry, Conductivity, Density, Karl-Fisher (water content), Differential Scanning Calorimetry (DSC), Viscosity.

Custom-made Electrolytes & Materials: please feel free to contact us regarding to your specific needs, such as formulations, analytical methods, packaging ...

Next generation electrolytes

Solvionic develops and produces electrolytes of high quality for electrochemical applications in batteries and supercapacitors. Electrolyte development has been focused and ongoing for lithium-ion (Li-ion), sodium-ion (Na-ion) and Lithium-sulfur (Li-S) batteries as well as supercapacitors.

2) Hybrid electrolytes

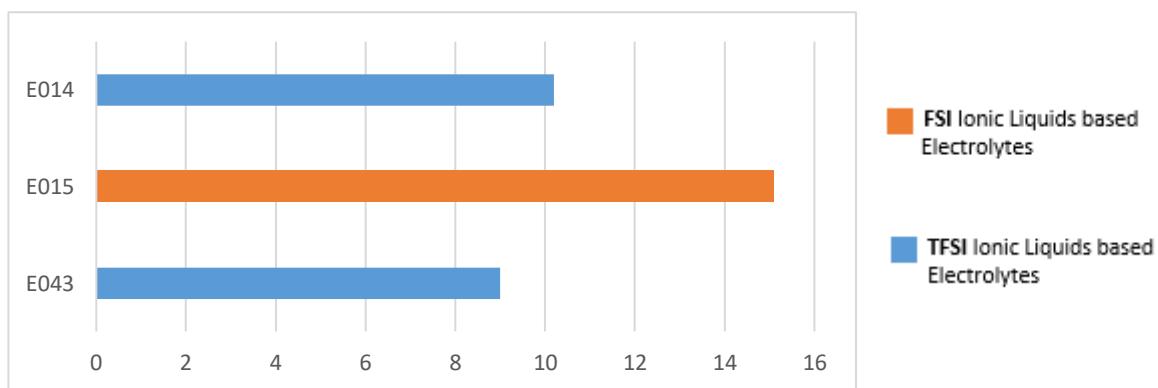

Non-flammable, safe and powerful electrolytes for Li-ion batteries can be obtained by adding ionic liquids into conventional electrolytes. This slightly increases their flash point and reduces their self-extinguishing time down to 15s.g⁻¹ (40wt% addition, flame-retarded) or 0s.g⁻¹ (50wt% addition, non-flammable). This promotes safer conditions for transport and industrial handling compared to pure organic solvents based electrolytes.

III. Supercapacitors

1) Eutectic mixtures for supercapacitors

Solvionic has demonstrated that these eutectic mixtures allow capacitive energy storage from -50 to 100 °C [1].

These eutectic mixtures have a wide stable liquidus temperature range from -80°C to 120°C. Applications in various types of electrodes have been shown [2,3,4]. Results have shown good capacity with maximum voltage range of 3.3 to 3.7V, when cycled at 100°C and 20°C respectively.

2) Ionic liquids for Supercapacitors

1-Ethyl-3-Methylimidazolium-based (Emim) ionic liquids are one of our best selling products in this domain. Their relatively high ionic conductivities (amongst ionic liquids) and thermal stability render them as good performing electrolytes in supercapacitors in general. They are available in different electrochemical grades.

IV. Gel/Polymer electrolytes

Formulations were recently developed by SOLVIONIC which can be processed (casting, deep-coating, etc.) into flexible, transparent and self-standing polymer electrolytes.

We can produce customized electrolyte using :

1) Membrane formulations for batteries

Next generation of electrolyte formulations for thin film type electrolyte.

A picture of the electrolyte film obtained as such is inserted (40-50 μ m): self-standing, stretchable and flexible.

Monomers & polymers

Ionic liquid monomers were recently developed by SOLVIONIC which can easily be transformed into charge conducting polymers either by thermal means or by UV-polymerisation. Applications of these polymers include their use as electrode binders, polymer electrolytes (all solid-state battery), cross-linkers and coatings.

Custom-made: Solvionic provides customized engineering of monomer molecules as well as formulations with the monomer molecules upon request. Formulations can contain additives and/or non-flammable ionic liquids.

REF.	MONOMERS	PACKAGING
IMSF2908B	3-Ethyl-1-Vinyl Imidazolium TFSI - 99.5% fw : 403,32 ; Hydrophobic Halides ≤ 10ppm ; H ₂ O ≤ 500ppm - packed under nitrogen	10g to 50g
IMSF2933B	3-Ethyl-1-Vinyl Imidazolium FSI - 99.5% fw : 303,3 ; Hydrophobic Halides ≤ 10ppm ; H ₂ O ≤ 500ppm - packed under nitrogen	10g to 50g
IMSF0108B	1-Vinyl-3H-imidazolium TFSI - 99.5% fw : 375,27 ; Hydrophobic Halides ≤ 10ppm ; H ₂ O ≤ 500ppm - packed under nitrogen	10g to 50g
IM1308B	1-Allyl-3-methylimidazolium TFSI - 99.5% fw : 403,32 ; Hydrophobic Halides ≤ 10ppm ; H ₂ O ≤ 500ppm - packed under nitrogen	10g to 50g
